

Axiame **GX** Accelerator for interfaces  
between SAP and ADP GlobalView

**Sales Deck**

# Simplifying interfaces between SAP and ADP GlobalView

- **Rationale:**
  - **Outbound: SAP to ADP GlobalView G2 interface**
    - Can not be implemented using the standard SAP distribution model
    - Is very complex
    - Takes a long time to be implemented
    - Outbound interface reliability is often an issue
  - **Inbound: ADP GlobalView to SAP**
    - Is not an ADP GlobalView standard
- **The Axiame GX Accelerator**
  - Is implemented on an SAP system within 2 weeks (ABAP)
  - Addresses all technical complexities
  - Can be entirely configured (mappings, transcodifications...)
  - Outbound:
    - Can generate either SAP IDocs or flat files (G2 format)
  - Inbound:
    - Utilizes a format already accepted by ADP
    - Axiame provided source code conforms with ADP's standards of coding

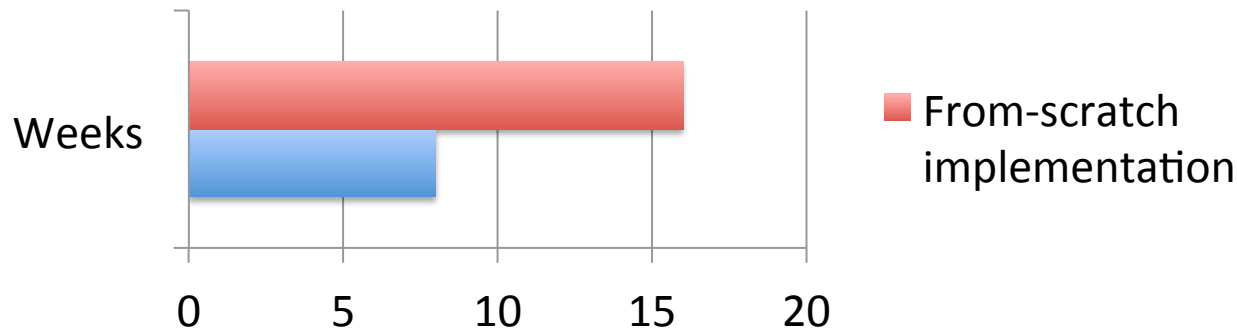

# Benefits of using Axiame GX accelerator

- **Save time: quick implementation of the payroll “G2 interface” from SAP to ADP GlobalView and ADP to SAP:**
  - Only 2 weeks of actual build time required: 5 to 10 times less compared to from-scratch implementations
  - Testing can be expedited:
    - Only country-specifics need to be tested
    - Defects fixing is quickly done
- **Save cost: Reasonable implementation cost**
- **Quality:**
  - We have deployed more than 20 countries on interfaces to and from ADP GV: we know exactly how it works and the challenges it comes with. Axiame accelerator for ADP GV already addresses all these, so we can focus on real business functionalities.
  - You can focus on functional aspects and forget technical issues
- **Maintenance:**
  - Axiame can handle the maintenance of your Axiame accelerator, but you are free to do it yourself if you prefer.

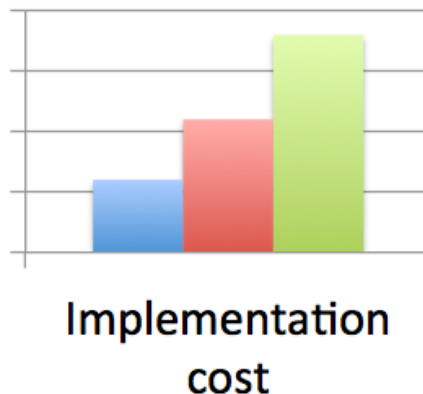

# Implementation time comparison

- **From our experience, interfaces are often the cause of delays on projects. This is due to:**
  - Not good enough knowledge of the source or target systems by the developers
  - Underestimation of the complexity
- **With Axiame **GX** Accelerator, a full implementation of an interface for one country (design, build and testing included) can be completed within 2 months, compared to up to 4 months for from-scratch implementations**

# Implementation cost comparison

- **A from-scratch implementation of the G2 interface from SAP to ADP GlobalView requires:**
  - 1 functional consultant for the design specifications during 2 weeks
  - 1 or 2 expert developers during up to 4 months time
  - 3 to 4 testers to conduct IT testing and UAT during 2 months
- **With Axiame GX Accelerator, implementation of one country on the G2 interface to ADP GlobalView:**
  - Requires 1 functional consultant for the design specifications during 2 weeks
  - Requires minimal testing: 1 tester during 2 weeks is sufficient

- Axiame Accelerator for ADP GlobalView
- From-scratch with offshore developers
- From-scratch with onshore developers
